Intelcan Contracted to provide a Multi-Radar Processing System to Indonesia

Ottawa, Canada, 29 April 2003 - Intelcan Technosystems Inc. signed a contract with the Indonesian Institut Teknologi Bandung Department of Aeronautics and Astronautics for the delivery of a multi-radar tracking system.

Intelcan will provide its state-of-the-art multi-radar processing system which will process and track data from multiple radars. Short-term radar-based conflict alert, minimum safe altitude warning alert and hazardous airspace intrusion alert are some of the key features of the system. The total system will be delivered in three months.

Mr Moe Vyas, Vice President Business Development said, "Intelcan is proud to be contributing to the modernization of Indonesian air navigation system. The Institute had, after considerable, research selected Intelcan system as being one of the most advanced and flexible packages in the world. By cooperating with a competent Indonesian institute, Intelcan will be facilitating a real transfer of technology to Indonesia."

Mr Zvi Glanz, Senior Vice President said, "This is a good beginning and we look forward to increasing our involvement in Indonesia."
